

CASE STUDY — DATA ANALYSIS

Retail Sales Analysis KinTop Fashion

THE CONTEXT

A 5-store fashion chain in Kinshasa (KinTop Fashion) had 500 orders recorded over 18 months, with no clear overview of its commercial performance.

THE CHALLENGE

Raw data in Excel, no consolidated analysis, and operational issues potentially invisible without a quantified audit: order completion, returns, performance by store and by salesperson.

MY SOLUTION

Data cleaning and analysis with Python (Pandas), a full diagnosis (revenue, order statuses, categories, stores, payment methods), then a structured report with 7 concrete, prioritized recommendations, delivered as a PDF with visualizations.

THE RESULT

Detection of a store running at a 70% completion rate versus 85-89% elsewhere — a problem that had stayed invisible — plus 6 other concrete action levers (mobile payment, promotional strategy, sales training, online channel).

REPORT PREPARED FOR KINTOP FASHION

Sales Analysis Report & Strategic Recommendations

Strategic Recommendations

7 prioritized action levers for management

KINTOP FASHION

Strategic Recommendations

Analysis of 500 orders · June 2024 – December 2025 · 5 stores, Kinshasa

Document prepared for management — 7 prioritized action levers

Overview

The figures that frame the analysis

€81,101

Total revenue

€162

Average order value

84.6%

Overall completion rate

489

Estimated unique customers

This analysis surfaces 7 concrete action levers — some urgent (operational reliability), others structural (training, digital) — to improve KinTop Fashion's commercial performance.

1 Urgent priority: Limete Boutique

Order completion rate is abnormally low

- **69.8% of orders completed at Limete** — versus 85 to 89% in the other 4 stores, a gap that is far from trivial.
- Priority areas to audit: stockouts, understaffing, or checkout friction.
- Every completion point recovered here has more impact than any other commercial lever.

Order completion rate by store

2

Reduce friction on Mobile Money

This payment method concentrates the most failed transactions

- **14% of Mobile Money orders remain “pending”**, versus 5% for Mastercard.
- Its cancellation rate is also the highest: 5.4%, more than double the average.
- Recommendation: check confirmation delays with the Mobile Money provider and simplify the payment flow to reduce drop-offs.

Pending orders by payment method

Rethink the promo-code strategy

Current promotions seem to lower the average order value rather than raise it

€134

Average order value — orders WITH a promo code

€167

Average order value — orders WITHOUT a promo code

- Recommendation: tie promotions to a minimum purchase amount (e.g. “-10% from €100”) rather than a flat discount — to drive volume without eroding margin on small baskets.

4 Capitalize on Coat & Jacket

Your two premium categories, with high unit value

- **Coat + Jacket = 34% of total revenue**, with an average order value of €388-397 — well above the overall average (€162).
- Plan restocking before the cold season (Nov-Dec, the natural sales peak).
- Train salespeople to upsell these two categories and feature them in store windows and on social media.

Revenue by category — top 5

Spread best sales practices

A large average-order-value gap between salespeople — a training opportunity

- **Mr L. achieves the best average order value (€212)** — 60% more than the team's lowest.
- Identify his advisory and upsell techniques and share them at a team meeting.
- Realistic goal: bring the whole team closer to the upper average (~€175).

Average order value by salesperson (€)

6 **Grow the online channel**

Digital is only a third of revenue

- In-store dominates (65%), but the growth potential lies on the digital side.
- KinTop already has an active LinkedIn/Facebook presence — the challenge is converting that visibility into online sales.
- Levers: simplify the online checkout, run targeted campaigns, and highlight bilingualism as a differentiator.

Revenue share by channel

Check the quality of the Scarf range

A disproportionate concentration of returns relative to sales volume

5 / 23

total returns concentrated on the single Scarf category

- Scarf is the most-returned category, while its revenue (€4,951) stays modest — a disproportionate signal.
- Check: sizing/fit issue, misleading online product description, or material quality.
- Recommendation: review the product pages and customer returns for this range before the next restock.

Prioritized action plan

Summary of the 7 recommendations

URGENT

- Audit Limete Boutique
- Fix the Mobile Money friction

SHORT TERM

- Revise the promo codes
- Restock Coat & Jacket
- Check Scarf quality

STRUCTURAL

- Sales coaching (share Mr L.'s practices)
- Grow the online channel
